RISC OS 5.20

Boot structure

- (A) The boot process starts here: '*Run !Boot' executes !Run - this invokes B, C, then either D (when booting) or E (from desktop to configure machine)
- (B) '*Run !System' sets up 'path' variables so that library modules can be found
- (C) '*Run BootVars' sets up a lot of variables defining file associations etc.
- (D) runs 'PreDesktop', add Apps to the Apps folder, runs apps in 'PreDesk', runs 'DeskTop' to set up the desktop and then runs apps in 'Tasks'
- (E) shows you how to re-configure the machine
